I'm a serious Frontend developer on a mission to spark my coding revolution! I content. My web dev skills are not at all joke built 15+ websites and counting! Now, I'm diving into the fascinating world of machine learning. Seeking a role where I can leverage my tech expertise, content magic, and community spirit to make a real impact.

Education

Pydah college of Engineering,Kakinada
Affiliated to Jawaharlal Nehru Technical University
2025, GPA 8.0/10

Leadership: As a Class Representative, I actively foster a collaborative and supportive environment for my peers, amplifying their voices and addressing their needs. My dedication to personal and professional growth, coupled with my ability to effectively communicate and guide others, has enabled me to make a positive impact on those around me.

Participated in One Day Workshop at Inter college level which i emerged as winner.

Skills

Web Development: HTML, CSS, JavaScript, Python, Nodejs ReactJS, NextJS, ExpressJS, Angular
Programming in Python

Projects

Project1:

Website for Tourism bookings:

We created a tourism website which acts as a guide book for the tourists in which they have to create an account for their tour. Based on the location they are in it suggests the best visited places for them .And we associate with them until their tour comes to end. And we provide some packages for different tour.

Project2

An dynamic web Application for College Placement Cell:

At my college level we developed a placement cell website for our college which has an special authentication which special access for Placement cell and top level management. Which uses to track the progression in placements.

Project 3

An dynamic ecommerce website which is realistic features and ui/ux interfaced
